

I support fully the well-founded comments submitted by The American Radio Relay League Concerning Docket ET 03-104. The proponents of Broadband over Power Line seem to have forgotten one thing - that the utilities have a difficult time keeping up on the power line noise problem that they generate. I refer to the letters sent out on a weekly basis which I read and note at least one or more letters reminding the utilities of its responsibility on power line noise. They seem to have a problem with addressing this in a prompt responsible fashion. Therefore, I see that if they start having radiation problems interfering with HF communication, I don't conceive them being any more responsible in maintaining the BPL system.
